Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claim 14, drawn to an isolated pyruvate carboxylase, classified in class 435, subclass 183.
- II. Claims 15-17, drawn to a method of making amino acids comprising expressing an isolated nucleic acid molecule encoding pyruvate carboxylase, classified in class 435, subclass 115.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the method of amino acid making of Group II is utilizing DNA encoding carboxylase which is materially different than carboxylase of Group I. Further, the carboxylase of Group I may be made synthetically, which is an entirely different method than that of Group II.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
